# The Linux steps

- Get a computer running Linux
- Use git to download the SMLY wallet source
- Run the tools to compile the code
- Install the wallet where you want it

Quick video commenting on these slides

# Get a computer running Linux

Any Linux machine will do.

Some favourites:

- NUC
- Raspberry pi
- Any PC

Caveat: An old computer will do, but if it is **very** small (low on memory/disc space/slow) then it may be difficult to compile or run the wallet.

# Linux: Use git to download the SMLY wallet source

Simple:

```
git clone http://github.com/tutor-web/smileyCoin
```

Gives a new folder, smileyCoin

# Linux: Run the tools to compile the code

- ./autogen.sh
- ./configure
- make

Caveat: May need to modify src/Makefile on a Raspberry pi.

# Linux: Install the wallet where you want it

## Typical

- `cd`
- `mkdir bin`
- `cd smileyCoin/src`
- `mv smileycoind smileycoin-cli $HOME/bin`

# Windows: Compiling the wallet

# Mac OSX: Compiling the wallet
