

Statistical techniques for stock assessments

fish610.055 Fisheries and ecosystem models

Gunnar Stefansson

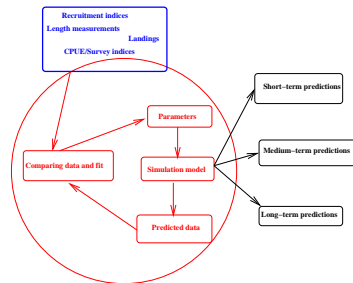

April 10, 2018

Biological models

- Conceptual model of biology
- Mathematical description of the model
- Population models: Usually a forward prediction model
- Growth etc: Mathematical description of process
- Remember: **Parsimony!**

Formal statistical procedures

Model contains parameters
 Model predicts data
 Parameters are estimated by fitting model to data

Population models

Some basic population model types:

- Equilibrium bulk biomass/production model
- Dynamic bulk biomass model
- Dynamic age structured production model
- Back-calculation model
