Polynomials

The general polynomial

The general polynomial:
$$p(x) = a_0 + a_1 x + a_2 x^2 + ... + a_n x^n$$

The simplest: $p(x) = a$

E

<ロト < 四ト < 回ト < 回ト

The quadratic

The general form of the quadratic (parabola)
is
$$p(x) = ax^2 + bx + c$$
.
The simplest quadratic is $p(x) = x^2$

Figure: Parabolas: Quadratic functions.

<ロト < 四ト < 回ト < 回ト

a) Positive: f(x) = x^2

E

b) Negative: f(x)=-(x-2)^2

The cubic

The general form of a cubic polynomial is: $p(x) = ax^3 + bx^2 + cx + d$

Figure: $y = x^3 - 20x^2 - 30x - 4$

The Quartic

The general form of the quartic polynomial is $p(x) = ax^4 + bx^3 + cx^2 + dx + e$

Figure: The general shape. Here we used the following equation $y = x^4 - x^3 - 7x^2 + x + 6$

A (1) < (2) </p>

Solving the linear equation

If the value of y is given and we know that x and y are on a specific line so that y = a + bx, then we can find the value of x

< ロト < 同ト < ヨト < ヨト

Roots of the quadratic equation

The general solution of $ax^2 + bx + c = 0$ is given by $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$.
